This Substack discusses the Jeff Dahmer "serial killer" story from a **critical perspective** in light of the many anomalies that have been identified with this story presented by mainstream media and other sources.

We carry out and encourage [OSINT \(Open-Source Intelligence\)](#) research about the case using **legally gathered information from free and paid public sources**. This includes:

- Public records, including court filings, arrests, and convictions
- Publicly available genealogical information
- Academic papers
- Telephone directories
- Census data
- Publicly available mugshots
- Social media
- News articles
- Information obtained via FOIA requests.

Open-source intelligence

From Wikipedia, the free encyclopedia

This article has multiple issues. Please help [improve it](#) or discuss these issues on the [talk page](#). ([Learn how and when to remove these template messages](#))

Open-source intelligence (OSINT) is the collection and analysis of data gathered from open sources (covert sources and publicly available information [PAI]) to produce actionable intelligence. [OSINT is primarily used in national security, law enforcement, and business intelligence functions](#) and is of value to analysts who use non-sensitive intelligence in answering [classified, unclassified, or proprietary intelligence requirements](#) across the previous intelligence disciplines.^[1]

Categories [\[edit \]](#)

OSINT sources can be divided up into six different categories of information flow:^[2]

- **Media**, print [newspapers](#), [magazines](#), [radio](#), and [television](#) from across and between countries.
- **Internet**, online publications, [blogs](#), [discussion groups](#), citizen media (i.e. – cell phone [videos](#), and [user created content](#)), [YouTube](#), and other [social media](#) websites (i.e. – [Facebook](#), [Twitter](#), [Instagram](#), etc.). This source also outpaces a variety of other sources due to its timeliness and ease of access.
- **Public government data**, public government reports, budgets, hearings, [telephone directories](#), press conferences, websites, and speeches. Although this source comes from an official source they are publicly accessible and may be used openly and freely.
- **Professional and academic publications**, information acquired from [journals](#), conferences, symposia, [academic papers](#), dissertations, and these
- **Commercial data**, [commercial imagery](#), financial and industrial assessments, and databases.
- **Grey literature**, technical reports, [preprints](#), patents, working papers, business documents, unpublished works, and [newsletters](#).

OSINT is distinguished from research in that it applies the [process of intelligence](#) to create tailored knowledge supportive of a specific decision by a specific individual or group.^[3]

This is not a conspiracy Substack. We encourage debate from a critical perspective based on **evidence found and balanced conclusions.**

If you haven't already done so, we encourage you to look at some of the key posts to see what has been uncovered so far. These include:

- Alleged victim Richard Guerrero's [death certificate from 1960](#).
- The true identity of alleged victim "Eddie Smith," who was [murdered in 1996](#).

...and much more.

Feel free to ask any questions.
